

ECRO[®] antistatic fabric

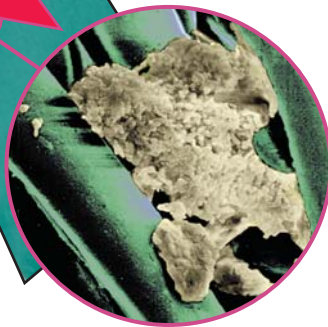

Clinical Protective Clothing for Intensive Care/ Trauma and Infection control.

This reusable suit is a clinically proven Medical Device.

Bacteria carrying skin particle trapped on the microstructure of the fabric

Bacterial Barrier

Protection means minimising the penetration of liquids contaminated by infective agents and a low release of particles from the surface of the clothing to reduce the spread of infection.

Liquid repellent to stop penetration of infective agents carried by liquids. ECRO[®] antistatic fabric has a very compact textile structure to filter out particles containing infective agents. The fabric is very low linting so that it is not a source of particles which carry infective agents and spread infection.

The protective uniform is easily cleaned and maintained.

"It is not acceptable for medical staff to be exposed to risk of infection"

ECRO[®] antistatic fabric uniforms are available: in Sizes XS - XXL; in Colours Lt Blue, Green, Navy Blue, Grey and Lilac.

CLINICALLY PROVEN REUSABLE PROTECTIVE UNIFORM
